

type of clay used pdf

Kaolinite ($\text{Al}_2\text{Si}_2\text{O}_5\text{H}_4$) is a clay mineral, part of the group of industrial minerals, with the chemical composition $\text{Al}_2\text{Si}_2\text{O}_5\text{H}_4$. It is a layered silicate mineral, with one tetrahedral sheet of silica (SiO_4) linked through oxygen atoms to one octahedral sheet of alumina (AlO_6) octahedra. Rocks that are rich in kaolinite are known as kaolin or china clay.

Kaolinite - Wikipedia

Clays exhibit plasticity when mixed with water in certain proportions. However, when dry, clay becomes firm and when fired in a kiln, permanent physical and chemical changes occur. These changes convert the clay into a ceramic material. Because of these properties, clay is used for making pottery, both utilitarian and decorative, and construction products, such as bricks, wall and floor tiles.

When a demonstration was arranged in one of my restrooms, it became obvious that the SaniGLAZE Process was the way to go. The SaniGLAZE Process has saved the school district time and money in the long run, along with granting the peace of mind of knowing the staff, students and general public feel confident using our restrooms due to the presentation of our floors and overall cleanliness.
